

Voice, Ultrafast broadband and TV networks

Statement concerning Choice of Service Providers on the OFNL Network for Business Customers

Date: 21st June 2019

Open Fibre Networks (trading as OFNL) are passionate about providing choice and best value to businesses connected to its fibre network.

OFNL provides an 'Open Access' network infrastructure to enable choice of providers from which you can get your voice and data services. However, there is a requirement for Service Providers to contract with OFNL to enable the delivery of their services over the OFNL network infrastructure.

OFNL has been very successful in attracting Service Providers to the network to deliver services to business clients and OFNL has signed up the following Service Providers to deliver these business services:

<ul style="list-style-type: none">• Vodafone• Virgin Media Business (Kings Cross site only)• Colt (Kings Cross site only)• Britannic Technologies Ltd.• Garnell Communications.• Anglia Telephones and Data Communications.• Charterhouse Voice and Data.• KCOM Ltd• Kee IT• Arrow Business Communications Ltd• AlwaysOn Ltd• Indigo Telecom Ltd• Marston's Telecom Ltd• New Star Networks• Maintel Ltd• Orbital Limited• ST Telco Limited• Team Partners Telecommunications• Kyonet-IT• IDNet• Wave 9• ION Networks Ltd	<ul style="list-style-type: none">• Excell Business Systems Ltd• RTP Solutions• Fluidone• Redcentric• Timico• Spitfire Network Services Limited• Exponential-e Limited• euNetworks Ltd (Kings Cross site only)• Seethelight• Jungle Networks Limited• Direct Save Telecom• Sand IT• The Comms Group• Sprint Convergence• Evolve• Cablecomm Networking Limited• Haptic Networks Ltd• Class Telecom Ltd• CCS limited.• Jet Telecom Ltd• Amvia Limited• QuantumGate Ltd

Voice, Ultrafast broadband and TV networks

The range of services available to business customers is dependent on the business requirements and OFNL are more than happy to discuss those requirements to identify a suitable solution using OFNLs wholesale services.

OFNL deliver a variety of services over the fibre network at the development and range from single phone and broadband services for a small business, through to large business connections that require Layer 2 Ethernet connectivity with bandwidths from 10Mbps up to 1Gbps and multiple voice channels delivered by Session Initiation Protocol (SIP) trunks, from 2 channels up to 30 or more channels.

OFNL will work with our list of contracted Service Providers to deliver services for business customers at a development. OFNL are happy to agree a contract with a Service Provider who is not currently contracted to deliver services across the OFNL infrastructure if a business would like to use their preferred Service Provider. This will be dependent on this preferred Service Provider agreeing terms with OFNL.
