

Voice, Ultrafast broadband and TV networks

## Statement concerning Choice of Service Providers on the OFNL Network for Business Customers

**Date: December 2019**

Open Fibre Networks (trading as OFNL) are passionate about providing choice and best value to businesses connected to its fibre network.

OFNL provides an 'Open Access' network infrastructure to enable choice of providers from which you can get your voice and data services. However, there is a requirement for Service Providers to contract with OFNL to enable the delivery of their services over the OFNL network infrastructure.

OFNL has been very successful in attracting Service Providers to the network to deliver services to business clients and OFNL has signed up the following Service Providers to deliver these business services:

- AlwaysOn Ltd
- Anglia Telephones and Data
- Amvia Limited
- Arrow Business Communications Ltd
- Britannic Technologies Ltd
- Cablecomm Networking Limited
- CCS limited
- Charterhouse Voice and Data
- Class Telecom Ltd
- Colt (Kings Cross site only)
- Communications
- Direct Save Telecom
- euNetworks Ltd (Kings Cross site only)
- Evolve
- Excell Business Systems Ltd
- Exponential-e Limited
- Fluidone
- Garnell Communications
- Haptic Networks Ltd
- IDNet
- Indigo Telecom Ltd
- ION Networks Ltd
- Jet Telecom Ltd
- Jungle Networks Limited
- KCOM Ltd
- Kee IT
- Kyonet-IT
- Maintel Ltd
- Marston's Telecom Ltd
- New Star Networks
- Orbital Limited
- QuantumGate Ltd
- Redcentric
- RedRaw
- RTP Solutions
- Sand IT
- seethelight
- Spitfire Network Services Limited
- Sprint Convergence
- ST Telco Limited
- Team Partners Telecommunications
- The Comms Group
- Timico
- Virgin Media Business (Kings Cross site only)
- Vodafone
- Wave 9

The range of services available to business customers is dependent on the business requirements and OFNL are more than happy to discuss those requirements to identify a suitable solution using OFNLs wholesale services.

OFNL deliver a variety of services over the fibre network at the development and range from single phone and broadband services for a small business, through to large business connections that require Layer 2 Ethernet connectivity with bandwidths from 10Mbps up to 1Gbps and multiple voice channels delivered by Session Initiation Protocol (SIP) trunks, from 2 channels up to 30 or more channels.

OFNL will work with our list of contracted Service Providers to deliver services for business customers at a development. OFNL are happy to agree a contract with a Service Provider who is not currently contracted to deliver services across the OFNL infrastructure if a business would like to use their preferred Service Provider. This will be dependent on this preferred Service Provider agreeing terms with OFNL.
